

8. Construct a C program to simulate Round Robin scheduling algorithm with C.

```
23 while(remain!=0)
24 {
25     for(i=0;i<n;i++)
26     {
27         if(rt[i]>0)
28         {
29             if(rt[i]<=tq)
30             {
31                 time+=rt[i];
32                 rt[i]=0;
33                 printf("P%d completed at %d\n",i+1,time);
34                 remain--;
35             }
36             else
37             {
38                 rt[i]-=tq;
39                 time+=tq;
40             }
41         }
42     }
43 }
44
45 return 0;
46 }
```

Enter number of processes: 5
Burst Time P1: 9
Burst Time P2: 8
Burst Time P3: 5
Burst Time P4: 6
Burst Time P5: 7
Enter Time Quantum: 2
P3 completed at 25
P4 completed at 27
P2 completed at 33
P5 completed at 34
P1 completed at 35
